

CLIENT SIDE

(Frontend Features)

SERVER SIDE

(Backend Systems)

Burhan Tahir

@iamshekhobaba

Overview

Frontend:

The frontend, or client-side, is the part of a web application that users interact with directly. It encompasses the design, layout, and interactive elements that are visible to the user.

Backend

The backend, or server-side, is responsible for managing the server, database, and application logic. It handles data storage, processing, and communication with the frontend.

Core Responsibilities

Frontend:

- Crafting and implementing the user interface (UI).
- Ensuring responsive design and cross-browser compatibility.
- Managing user interactions and animations.
- Enhancing performance for a smooth user experience.
- Collaborating with designers to translate visual concepts into functional interfaces.

Burhan Tahir

@iamshekhobaba

Core Responsibilities

Backend

- Managing server, application, and database operations.
- Creating and maintaining APIs for frontend-backend communication.
- Ensuring data security and integrity.
- Handling user authentication and authorization processes.
- Performing server-side rendering and data processing.

Technologies and Tools

Frontend

- Languages: HTML, CSS, JavaScript.
- Frameworks & Libraries: React, Angular, Vue.js, Svelte.
- Build Tools: Webpack, Babel, npm/yarn.
- Styling Tools: CSS preprocessors (Sass, Less), CSS frameworks (Bootstrap, Tailwind CSS).
- Development Tools: Task runners (Gulp, Grunt), browser developer tools.

@iamshekhobaba

Technologies and Tools

Backend

- Languages: JavaScript (Node.js), Python, Ruby, Java, PHP, C#, Go.
- Frameworks: Express.js, Django, Ruby on Rails, Spring Boot, Laravel, ASP.NET.
- Databases: MongoDB, PostgreSQL, MySQL, SQLite.
- DevOps Tools: Docker, Kubernetes, CI/CD tools (Jenkins, Travis CI).
- API Protocols: RESTful APIs, GraphQL

Interaction & Communication

Frontend

Directly interacts with users through the browser. Communicates with the backend via APIs (RESTful or GraphQL) to fetch and submit data.

Backend

Interacts with the database and other server-side services. Provides APIs to the frontend and handles core business logic, data storage, and server management.

Focus Areas and Skillsets

Frontend

- Emphasis on user experience (UX) and visual design.
- Proficiency in HTML, CSS, and JavaScript.
- Expertise in frontend frameworks and libraries.
- Knowledge of responsive design principles and accessibility standards.
- Skills in optimizing performance and ensuring cross-browser compatibility.

Burhan Tahir

in

@iamshekhobaba

Focus Areas and Skillsets

Backend

- Emphasis on server-side logic and database management.
- Proficiency in backend languages and frameworks.
- Understanding of relational and non-relational database systems.
- Knowledge of server architecture, deployment, and cloud services.
- Skills in implementing security measures and developing robust APIs.

Burhan Tahir

in

@iamshekhobaba

Performance Optimization

Frontend

- Reducing loading times and improving render performance.
- Optimizing images, fonts, and other assets.
- Implementing lazy loading and code splitting.
- Utilizing efficient algorithms and data structures.

Burhan Tahir

in

@iamshekhobaba

Performance Optimization

Backend

- Optimizing database queries and indexing.
- Implementing caching mechanisms (e.g., Redis, Memcached).
- Using load balancers and scaling servers.
- Reducing server response times and minimizing latency.
